

Take the Guesswork out of Landscape Irrigation and Save Water with . . .

SMARTLINE®

- Sprinklers Only Run When Landscape Needs Water
- Lowers Water Costs
- Saves Thousands of Gallons
- Healthier Lawn and Landscapes
- Totally Automatic
- Pays for Itself in 12 Months

Homeowners, property managers and municipalities across the country are joining the trend to "smart irrigation." SmartLine takes the guesswork out of sprinkler scheduling and automatically adjusts the irrigation every day, based on the actual needs of the landscape and on-site weather conditions.

SMARTLINE®
On-Site
Weather Station

SMARTLINE®
Modular Controller
4 to 48 Zones

SMARTLINE®
*Pays For Itself in
12 Months or Less*

ARE YOU FED UP WITH FIGURING OUT IRRIGATION SCHEDULES?

"SmartLine has freed me from the frustrations of controller programming. We put in new landscaping last summer and installed a SmartLine system. SmartLine automatically adjusts the sprinklers every day, based on the weather. The landscape looks great because plant, soil and sprinkler data are pre-programmed into the system. What a time-saver!"

Matt Ensler, Homeowner
Dallas, Texas

DO YOU WORRY WHEN OUT OF TOWN?

"Not us! We don't even think about our lawn and landscape when on vacation. SmartLine knows exactly how much water each zone needs. As a retired electrical engineer, I looked at controllers from many manufacturers. I decided on SmartLine because of the features and affordability. I installed it myself and it works like a million bucks."

Leon Pringle, Homeowner
Hattiesburg, Mississippi

ARE YOU WASTING WATER AND MONEY?

"SmartLine doesn't waste a drop. The SmartLine watering schedule is based on ET rates, which means that SmartLine replaces the plant's moisture as it is needed. We rely on SmartLine to keep our garden looking beautiful. Even in the summer, SmartLine irrigates with a precise amount so that we don't worry about watering restrictions."

Linda Mayne, Homeowner
Denver, Colorado

WHAT DO YOU DO IN A DROUGHT?

"The guesswork is gone. As a property manager, I am very concerned about the health of the landscape. We were getting letters because we were using too much water in the summer. Then we switched to SmartLine and the change has been dramatic. SmartLine cycles the irrigation so that water percolates to the root zone and keeps the plants looking great, even in a Texas drought. Water savings average 22% a year and are even greater when you factor in the rising costs of water."

Mike Maring, Commercial Property Manager
San Antonio, Texas

SMARTLINE®

DOES IT REALLY SAVE WATER?

"SmartLine is a revolutionary product and has changed the way we irrigate.

"For example, we converted the landscaping at a condominium resort in Kona, Hawaii, to SmartLine. The water savings have been so dramatic that the resort asked us to convert additional sites. Assuming the next six months of water savings are equal to the first six months, we will realize a savings of six million gallons of water the first year alone."

George Kenney, Soundview Landscape
Kona, Hawaii

IS IT EXPENSIVE TO CONVERT TO SMARTLINE?

"Customers don't hesitate when they find out they'll save 20 to 50 percent on their water bills and that the system will pay itself within 12 to 18 months. SmartLine is the most affordable 'smart system' on the market."

Tom Raden, Innovative Landscapes
Quartz Hill, California

WHAT DO WATER MANAGERS SAY ABOUT "SMART IRRIGATION"?

"'Smart irrigation' is a great benefit for everyone. Landscape contractors can take advantage of vouchers for weather-based irrigation controllers. This means that their clients can save money when they upgrade to a 'smart system'. New 'smart controllers' save time, labor, water and give contractors a competitive advantage."

Vickie Driver, Water Conservation Specialist
San Diego County Water Authority

WHAT ABOUT SOGGY AREAS OR RUN OFF?

"SmartLine immediately eliminated a run-off and erosion problem we had on our slope. SmartLine runs a 'cycle and run' soak function where the sprinklers run for 5 minutes, then turn off for 15 minutes while the water is absorbed, then it runs another 5-minute cycle. SmartLine also has a rain sensor that shuts down the irrigation until the ground dries out. The landscape looks great."

Dr. Benton Ellis, Homeowner
Dallas, Texas

DO WE HAVE TO CHANGE OUR SPRINKLERS TO INSTALL SMARTLINE?

"SmartLine can be installed in less than 90 minutes. It's a very easy upgrade. We switch out the old controller, install the weather station and connect to the valves. Customers love it because once we set the programming, nothing more needs to be done. The system works like clockwork and is very reliable. On one site, we saved 50,000 gallons of water."

Girvin Peters, Professional Landscape
Los Altos, California
